

Integrated Renewable Energy Company Seeks Acquisition

Woodbridge Europe, on behalf of its client, Oneworld Energy Inc., is conducting a comprehensive acquisition search for solar integrators.

Oneworld Energy (www.oneworldenergy.com) is an integrated renewable energy company with headquarters in Toronto, Canada and offices in Canada, Germany and the USA.

The company currently has three operating divisions:

1. Wind Park development (consulting and design/build for its own power generation)
2. Wind Turbine Blade Services division
3. Solar Power (integration services for others, and design/build for its own power generation)

Oneworld Energy uses a diversified approach to both its assets and the geographical location of those assets. In 2008 the company acquired a Germany-based photovoltaic ("PV") solar integrator. Oneworld Energy is in pursuit of further expansion in Europe and is looking to acquire additional companies within the solar integration business.

Oneworld Energy is looking to invest in companies that meet the following criteria:

- **Photovoltaic solar integrator**
- **Strong team in place willing to stay on to grow the company**
- **Generating revenues**

Being part of Oneworld Energy would provide cost advantages associated with capital items such as PV-panels and solar invertors leading to increased profitability. Furthermore Oneworld Energy brings the benefits of centralized marketing and administration that would enable you to concentrate on your core activities.

Woodbridge Europe welcomes inquiries from businesses interested in being part of Oneworld Energy Inc.
